EDUCATION

Higher Technical Degree in Data Science & AI
ISTEA
In progress

QA Manager
EducaciónIT
In progress

Full Stack Web Development
IAC Quilmes
Completed

C# .NET Programming
IAC Quilmes
Completed

SKILLS

Agentic AI
- Multi-agent systems
- MCP
- RAG & vector DBs
- Vision / OCR

Automation
- OpenClaw
- Hermes
- Buzz Agents
- Odoo ERP integration

Languages
- Python
- JavaScript / TypeScript
- C#
- SQL

Web
- React / Next.js
- Node.js
- Tailwind CSS

LANGUAGES

Spanish	Native
English	Basic

Profile

AI Developer with hands-on, production experience designing multi-agent systems that automate real business workflows — not prototypes. At Hitofusion I build and ship autonomous agents that read invoices with vision and load them into Odoo, triage and diagnose support tickets via WhatsApp with direct server access, and manage an executive's inbox with human-approved drafts. I design these as teams of specialized agents coordinated by a central orchestrator, with human-in-the-loop control at every critical step, on top of a full-stack background (React, Node.js, C#, SQL) and a foundation in QA. Currently completing a Higher Technical Degree in Data Science & AI at ISTEA and a QA Manager program.

Experience

2025 — Present

Hitofusion

AI Developer

- Designed and shipped a document-processing agent that reads vendor invoices with vision, validates the extracted data with the user, and posts them into Odoo — accounting and VAT — as a draft, pending human review.
- Built a multi-agent support system: one agent handles first contact and ticket creation over WhatsApp, a second performs deep technical diagnosis on the live system (including direct server access) and leaves internal notes before human escalation.
- Developed an email-triage agent that syncs, classifies and prioritizes an executive's inbox, summarizes relevant threads and drafts context-aware replies — always pending human approval before sending.
- Integrated LLM-based agent logic (orchestrator + specialized agents) into production software, following software engineering best practices.

2025 — 2026

Envero Selecto | Freelance

Administrator

- Full autonomous management of the business: customer service, sales, and stock/inventory coordination.

Featured Projects

Automated Accounting Agent

Vision-based invoice capture -> human validation -> Odoo posting, ready for VAT/accounting.

Support Agent Team

WhatsApp intake + technical diagnosis over SSH, with handoff notes for the human team.

Automated Email Agent

Inbox sync, classification and reply drafting for an executive — human approval required to send.
